MORE RESISTANT  
TO WATER

WATER CLEAN

It is an extremely soft and gentle woven fabric with its subtle shine and touch, reminiscent of cashmere, meeting the expectations of even the most discerning customers:

- cleaned simply with water;
- more resistant to water absorption;
- more resistant to animal nail scratches;
- non-allergenic;
- safe for humans and animals;
- certified;
- Coated with a special VIRUS PROTECT coating to protect against viruses and other microorganisms.

**COMPOSITION** 100% PL (Polyester)

**WIDTH** 140 cm

**WEIGHT** 381 g/m<sup>2</sup>

**MARTINDEILS** 50 000

**PILING** 4/5

**LIGHT FASTNESS** 5

**COUNTRY OF ORIGIN** POLAND

# VIRUS PROTECT

## WHAT IS VIRUS PROTECT?

Virus Protect is an innovative coating providing lasting protection against viruses, bacteria and fungi that cause infections. Its active molecules penetrate the DNA of microorganisms, which results in their effective destruction. Virus Protect provides long-lasting protection and active disinfection of the fabric surface.

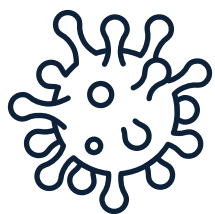

**EFFICIENCY**

**SAFETY**

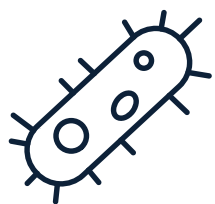

**DURABILITY**

## VIRUS PROTECT EFFECTIVELY NEUTRALIZES VIRUSES, BACTERIA, FUNGI, MITES AND OTHER MICROBES

### EFFICIENCY

VIRUSES

BACTERIA

FUNGI

Viral or bacterial infections are most often caused by contact with an infected person or surface. In order to increase the sense of security on a daily basis, we have created Virus Protect - an innovation that minimises the risk of potential contagion by an infected fabric surface on furniture. The Virus Protect coating contains millions of particles with disinfectants that penetrate the outer membrane of the micro-organisms, which leads to their effective destruction and prevents their spread. This leads to the reduction of 99.9% of bacteria, viruses and fungi on our furniture, providing protection and peace of mind for you and your loved ones.

### PROVEN EFFECTIVENESS

VIRUS PROTECT NEUTRALISES 99.99% OF BACTERIA IN 1-5 MIN

SAFETY

## VIRUS PROTECT IS SAFE FOR YOU AND YOUR LOVED ONES

Fabrics with Virus Protect coating are safe for people and the environment. This is confirmed by the Oeko-Tex Standard 100 certificate, which ensures that fabrics with this coating are free of harmful substances and completely safe for human health. These coatings are used on a daily basis in dental disinfection as well as on toys for small children and computer keyboards. The coating does not contain silver or heavy metals.

**The safety of Virus Protec is certified by:**

- **World Health Organization; WHO**
- **European Chemical Agency; BPR/ECHA**
- **USA Environmental Protection Agency; EPA**

## HOW DURABLE IS THE VIRUS PROTECT COATING? HOW CAN I CLEAN MY FURNITURE IN ORDER NOT TO DESTROY THE ANTIBACTERIAL PROTECTION?

Virus Protect does not provide a hygienic protection of our fabrics. It is important to remember about regular vacuuming and maintenance of upholstery fabrics, which will prevent soiling and significantly extend their lifespan.

The upholstery fabrics with Virus Protect coating should be cared for according to the instructions (which can be downloaded from the website according to the type of fabric).

By following the care instructions, we can be sure that the coating will maintain its properties up to 30 cycles of wet washing (in a washing machine) and 5 cycles of dry washing (chemical).
